@TF3604.com

- 20+ Years working with SQL Server
 - Development work since 7.0
 - Administration going back to 6.5
 - Fascinated with SQL internals

www.TF3604.com/dbatools

Agenda

- ▶ What is dbatools?
 - ▶ Getting started / installing dbatools
 - ▶ System compatibility
 - ▶ Categories of commands
 - ▶ Some basic commands
- 

What is dbatools?

- ▶ PowerShell-based set of commands to manage SQL Server
 - ▶ Community-produced
 - ▶ Open-source, free to use
 - ▶ Widely adopted
 - ▶ In preview for many years, stable release in 2019
 - ▶ Presently has 650+ commands
 - ▶ Uses SMO behind the scenes
- 

What can I do with dbatools?

- ▶ Read/write data
 - ▶ Find SQL Server instances on the network
 - ▶ Manage most server and database-level objects
 - ▶ Do backup and restore operations
 - ▶ Install and/or update SQL instances
 - ▶ Migrate databases or entire instances
 - ▶ Manage SQL Agent
 - ▶ Install other community tools onto SQL instances
 - ▶ Automate, automate, automate
- 

Installing dbatools

```
Install-Module dbatools;
```

Install-Module : Administrator rights are required to install modules in 'C:\Program Files\WindowsPowerShell\Modules'. Log on to the computer with an account that has Administrator rights, and then

try again, or install 'C:\Users\hansen\Documents\WindowsPowerShell\Modules' by adding "-Scope CurrentUser" to your command. You can also try running the Windows PowerShell session with elevated

rights (Run as Administrator).

```
At line:1 char:1
```

```
+ Install-Module dbatools;
```

```
+ ~~~~~
```

```
    + CategoryInfo          : InvalidArgument: (:) [Install-Module],  
ArgumentException
```

```
    + FullyQualifiedErrorId :  
InstallModuleNeedsCurrentUserScopeParameterForNonAdminUser,Install-Module
```

Installing dbatools

```
Install-Module dbatools;
```

```
NuGet provider is required to continue
```

```
PowerShellGet requires NuGet provider version '2.8.5.201' or newer to  
interact with NuGet-based repositories. The NuGet provider must be  
available in 'C:\Program
```

```
Files\PackageManagement\ProviderAssemblies' or  
'C:\Users\hansen\AppData\Local\PackageManagement\ProviderAssemblies'.  
You can also install the NuGet provider by running
```

```
'Install-PackageProvider -Name NuGet -MinimumVersion 2.8.5.201 -  
Force'. Do you want PowerShellGet to install and import the NuGet  
provider now?
```

```

Installing dbatools

Untrusted repository

You are installing the modules from an untrusted repository. If you trust this repository, change its InstallationPolicy value by running the Set-PSRepository cmdlet. Are you sure you want to install the modules from 'PSGallery'?

[Y] Yes [A] Yes to All [N] No [L] No to All [S] Suspend [?] Help
(default is "N"):

System compatibility

- ▶ Nearly 100% of dbatools commands will work for
 - ▶ SQL Server 2012 or later, running on modern Windows Server OS
 - ▶ Windows 7 or later, or Windows Server 2008 R2 or later for client
- ▶ But will work with decreased amount of functionality for
 - ▶ SQL Server versions back to SQL Server 2000
 - ▶ Azure versions of SQL Server
 - ▶ SQL Server on Linux / containers
 - ▶ macOS and Linux workstations

Categories of Commands (1/2)

- ▶ Availability Groups
- ▶ Backup and Restore – Database
- ▶ Backup and Restore – Certificates
- ▶ Certificates and Encryption
- ▶ Community Tools
- ▶ Connections
- ▶ Connection Strings
- ▶ Databases
- ▶ Data Masking
- ▶ dbatools Computer Management
- ▶ dbatools Configuration
- ▶ dbatools Support tools
- ▶ dbatools update watcher
- ▶ DBCC
- ▶ Diagnostics and Performance
- ▶ Detach and Attach
- ▶ Endpoints
- ▶ Export
- ▶ File System and Storage
- ▶ FileStream
- ▶ Lookup (Find)
- ▶ General
- ▶ Linked Servers
- ▶ Log Shipping
- ▶ Login and User Management
- ▶ Mail and Logging

Source: <https://dbatools.io/commands/>

Categories of Commands (2/2)

- ▶ Max Memory
- ▶ Migration
- ▶ Mirroring
- ▶ Network and Firewall
- ▶ Policy-Based Management
- ▶ Registered Servers
- ▶ Replication
- ▶ Resource Governor
- ▶ Security and Encryption
- ▶ Server Management
- ▶ Service Principal Names (SPNs)
- ▶ Services
- ▶ Data Generation
- ▶ Snapshots
- ▶ sp_configure
- ▶ SQL Agent
- ▶ SQL Client Configuration
- ▶ SQL Management Objects
- ▶ System startup
- ▶ tempdb
- ▶ Traces, Profiler and Extended Events
- ▶ Utilities
- ▶ Windows Server Failover Cluster
- ▶ Table Data

Source: <https://dbatools.io/commands/>

Instance migrations

```
Start-DbaMigration -Source sqlsrc\sql2016 `
-Destination sqldest\sql2022
-BackupRestore -SharedPath "\\ali\temp";
```

- User databases (mostly)
- Logins
- DB mail objects
- Agent objects
- Linked servers
- CMS groups/servers
- Configurations
- User objects in sys databases
- System triggers
- System backup devices
- Audits / Server audit specs.
- Endpoints / Extended events
- Policy management objects
- Resource governor objects
- Data collector sets
- Startup procedures

Instance migrations

```
Copy-DbaDatabase -Source sqlsrc\sql2016  
-Destination sqldest\sql2022  
-Database CorpDB  
-BackupRestore -SharedPath "\\ali\temp";
```

- Very useful command
- Many, many other “migration” commands

Community tools

- ▶ Install commonly-used community tools on multiple target servers at once
 - ▶ Ola Hallengren Maintenance Solution
 - ▶ WholsActive
 - ▶ Dr. DMV Diagnostic Queries
 - ▶ First Responder Kit
 - ▶ And others
- ▶ Has commands to interact with community tools

Enumerating instances

```
Find-DbInstance -ComputerName ali3 -ScanType Browser;
```

```
Find-DbInstance -DiscoveryType Domain;
```

Getting data in and out of SQL Server

```
$customers = Invoke-DbaQuery -SqlInstance $ali3  
-SqlCredential sqlsaturday -Database CorpDB  
-Query "select top (100) * from CorpDB.dbo.Customer;"
```

```
Write-DbaDataTable -SqlInstance $ali3 -Database "tempdb"  
-InputObject $customers -AutoCreateTable -Table "customer";
```

Inventorying SQL Servers

```
Get-DbaDatabase -SqlInstance $ali3 |  
Write-DbaDataTable -SqlInstance $ali3 -Database "tempdb" `  
-AutoCreateTable -Table "databases";
```

- Do similar with
 - Disk usage
 - Jobs
 - Backup info
 - Configurations
 - Logins
 - Etc.

Summary

- ▶ This is just the tip of the iceberg
- ▶ dbatools is a rich library of commands to
 - ▶ Obtain large amounts of information about your SQL estate
 - ▶ Manage your SQL Servers in many ways
 - ▶ Operate on many instances with a single command
 - ▶ Many other tasks limited only by your imagination
